

AGROGUIDE

Crop information

01

Crop information provides essential details such as cultivation practices, climate requirements, and yield potential for various agricultural crops

Farming techniques

02

Farming techniques encompass a range of methods and practices employed in agricultural production to optimize crop yield, resource utilization, and environmental sustainability.

Market prices

03

Market prices reflect the monetary value of goods and services exchanged between buyers and sellers in a particular market at a given time.

Chemicals

04

Chemicals used in crop production refer to substances such as fertilizers, pesticides, and herbicides applied to enhance plant growth, control pests, and manage weeds, respectively.

Weather

05

Weather forecasting involves predicting atmospheric conditions such as temperature, precipitation, and wind patterns for a specific location over a given period.

Government schemes

06

Government schemes are initiatives implemented by governmental bodies to address specific social, economic, or developmental issues within a country.
